**Subsea Bullseyes** are large visible manual slope indicators. They are used to properly position subsea equipment and/or components on the sea floor. All units provide a clock orientation face and are easily readable by ROV's or TV cameras. Our bullseyes are depth rated to more than -12,000 ft. and are available in variety of sizes, materials, and degree of inclinations. Whether your project requires a fixed mounting plate, leveling base, or is ROV retrievable, Radoil has the solution.
